Iɴ the 21st century as we know people are more influenced on social networks. Social networks helps the people to communicate,interact with each other.In social network service we may be able to read the article or news which is not yet published on mainstream media but it may contain all types of article or may be messed up. So MoveTALK which is Social networking service which is exclusively for certain movements that is happening all over the globe. It has two modules namely, Admin,user. Admin can login and add movements and manages the user activities.User should create the account or login if already exist a account to post their article or any writings about particular movements as they know. Users can share,like,comment on other's post. Users which is not logged can only read the posts.Posts are sorted on the basis of between location of movement which is happening and locality of user who posts about that particular movement. It helps to decrease the misleading of particular movements. Movements are categorized by hashtags which is initially created on user's post by writing movement's name prefixing with hashtag or admin can also create it. Logged-in users can up vote or down vote other's post which indicates the genuinity of the post.
